**Overview:** Test endpoint  
**Description:** Simple test endpoint to verify service availability  
**Controller:** [LEOS Document](#)  
**Method:** `test`

**Responses**

| Status Code | Description          | Content-Type     | Schema |
|-------------|----------------------|------------------|--------|
| 200         | Service is available | application/json | string |

## 2.2 [POST/applyMetadataAsync](#)

**Overview:** Apply metadata asynchronously

**Description:** Applies metadata to LEOS document asynchronously with callback

**Controller:** [LEOS Document](#)

**Method:** [applyMetadataAsync](#)

### Parameters

| Name        | In    | Required | Type          | Description         |
|-------------|-------|----------|---------------|---------------------|
| inputFile   | query | Yes      | MultipartFile | Input document file |
| callbackUrl | query | Yes      | string        | Callback URL        |
| email       | query | No       | string        | User email          |

### Responses

| Status Code | Description                        | Content-Type     | Schema |
|-------------|------------------------------------|------------------|--------|
| 200         | Async process started successfully | application/json | Object |
| 500         | Internal server error              | application/json | object |

## 2.3 [POST/applyMetadata](#)

**Overview:** Apply metadata to document

**Description:** Applies metadata to LEOS document and validates

**Controller:** [LEOS Document](#)

**Method:** [applyMetadata](#)

### Parameters

| Name      | In    | Required | Type          | Description         |
|-----------|-------|----------|---------------|---------------------|
| inputFile | query | Yes      | MultipartFile | Input document file |
| email     | query | No       | string        | User email          |

### Responses

| Status Code | Description                   | Content-Type     | Schema |
|-------------|-------------------------------|------------------|--------|
| 200         | Metadata applied successfully | application/json | Object |
| 500         | Internal server error         | application/json | object |

## 2.4 **POST**/getRenditions

**Overview:** Get document renditions

**Description:** Converts LEOS document to various output formats

**Controller:** [LEOS Document](#)

**Method:** [getRenditions](#)

### Parameters

| Name              | In    | Required | Type          | Description         |
|-------------------|-------|----------|---------------|---------------------|
| inputFile         | query | Yes      | MultipartFile | Input document file |
| main              | query | No       | MultipartFile | Main document file  |
| isWithAnnotations | query | No       | boolean       | Include annotations |

### Responses

| Status Code | Description                       | Content-Type     | Schema |
|-------------|-----------------------------------|------------------|--------|
| 200         | Renditions generated successfully | application/json | Object |
| 500         | Internal server error             | application/json | object |

## 2.5 **POST**/prefinalization-callback

**Overview:** Prefinalization callback

**Description:** Callback endpoint for prefinalization process

**Controller:** [LEOS Document](#)

**Method:** [processPrefinalization](#)

### Parameters

| Name      | In    | Required | Type          | Description          |
|-----------|-------|----------|---------------|----------------------|
| token     | query | Yes      | string        | Authentication token |
| inputFile | query | Yes      | MultipartFile | Input document file  |

### Responses

| Status Code | Description           | Content-Type     | Schema |
|-------------|-----------------------|------------------|--------|
| 202         | Callback accepted     |                  |        |
| 500         | Internal server error | application/json | object |

## 2.6 **POST**/updateWithTranslations

**Overview:** Update document with translations

**Description:** Updates LEOS document with translation files

**Controller:** [LEOS Document](#)

**Method:** [updateWithTranslations](#)

### Parameters

| Name             | In    | Required | Type          | Description           |
|------------------|-------|----------|---------------|-----------------------|
| inputFile        | query | Yes      | MultipartFile | Input document file   |
| translationsFile | query | Yes      | MultipartFile | Translations zip file |

### Responses

| Status Code | Description                   | Content-Type     | Schema |
|-------------|-------------------------------|------------------|--------|
| 200         | Document updated successfully | application/json | Object |
| 400         | Invalid translations file     |                  |        |
| 500         | Internal server error         | application/json | object |
