

LEOS REPOSITORY API

API documentation for LEOS Repository

Version: 5.5.0-SNAPSHOT

1. Catalog

1.1 [POST/catalog/un-publish-template](#)

Overview: Unpublish custom template

Description: Removes a custom template from the catalog

Controller: [Catalog](#)

Method: [unpublishCustomTemplate](#)

Parameters

Name	In	Required	Type	Description
packageId	query	Yes	string	Package ID
userId	query	Yes	string	User ID

Responses

Status Code	Description	Content-Type	Schema
200	Template unpublished successfully	application/json	boolean
404	Template not found	application/json	object
500	Internal server error	application/json	object

1.2 [POST/catalog/publish-template](#)

Overview: Publish custom template

Description: Publishes a new custom template to the catalog for specified DGs

Controller: [Catalog](#)

Method: [publishCustomTemplate](#)

Parameters

Name	In	Required	Type	Description
legFileId	query	Yes	string	LEG file ID
templateName	query	Yes	string	Template name

dgs	query	Yes	List	List of DG codes
userId	query	Yes	string	User ID
originalDg	query	Yes	string	Original DG code

Responses

Status Code	Description	Content-Type	Schema
200	Template published successfully	application/json	Object
400	Invalid request parameters	application/json	object
500	Internal server error	application/json	object

1.3 [POST/catalog/update-template](#)

Overview: Update custom template

Description: Updates an existing custom template in the catalog

Controller: [Catalog](#)

Method: [updateCustomTemplate](#)

Parameters

Name	In	Required	Type	Description
packageId	query	Yes	string	Package ID
templateName	query	Yes	string	Template name
dgs	query	Yes	List	List of DG codes
userId	query	Yes	string	User ID
originalDg	query	Yes	string	Original DG code

Responses

Status Code	Description	Content-Type	Schema
200	Template updated successfully	application/json	Object
404	Template not found	application/json	object
500	Internal server error	application/json	object

1.4 GET/catalog/template/{packageId}

Overview: Get template information

Description: Retrieves detailed information about a specific template

Controller: [Catalog](#)

Method: `getTemplateInfo`

Parameters

Name	In	Required	Type	Description
packageId	path	Yes	BigDecimal	Package ID

Responses

Status Code	Description	Content-Type	Schema
200	Template information retrieved successfully	application/json	CustomTemplateInfo
404	Template not found	application/json	object
500	Internal server error	application/json	object

2. Config

2.1 GET/config/notifications/fetch

Overview: Fetch notifications configuration

Description: Retrieves the current notifications configuration

Controller: [Config](#)

Method: `configNotificationsFetch`

Responses

Status Code	Description	Content-Type	Schema
200	Configuration retrieved successfully	application/json	Object
500	Internal server error	application/json	object

2.2 **POST**/config/notifications/upload

Overview: Upload notifications configuration

Description: Saves notifications configuration in JSON format

Controller: [Config](#)

Method: [configNotificationsUpload](#)

Request Body

Required	Content-Type	Schema
Yes	application/json	String

Responses

Status Code	Description	Content-Type	Schema
200	Configuration uploaded successfully	application/json	Object
400	Invalid JSON format	application/json	object
500	Internal server error	application/json	object

3. Document

3.1 **GET**/documents/find-by-collaborator/{userName}/{entities}

Overview: Find documents by collaborator or entity

Description: Retrieves documents for a user or entity

Controller: [Document](#)

Method: [findDocumentsByUserNameOrEntityName](#)

Parameters

Name	In	Required	Type	Description
role	query	Yes	string	User role
category	query	Yes	string	Document category
userName	path	Yes	string	User name
entities	path	Yes	string	Entity names

Responses

Status Code	Description	Content-Type	Schema
200	Documents retrieved successfully	application/json	LeosDocumentList

3.2 GET/documents/find-by-packageId/{packageId}

Overview: Find document reference by package ID

Description: Retrieves document reference by package ID and category

Controller: [Document](#)

Method: [findDocumentRefByPackageIdAndCategory](#)

Parameters

Name	In	Required	Type	Description
packageId	path	Yes	string	Package ID
category	query	No	string	Category code

Responses

Status Code	Description	Content-Type	Schema
200	Reference found	application/json	Object

3.3 GET/documents/find-for-validation

Overview: Find documents for validation

Description: Retrieves packages that need validation

Controller: [Document](#)

Method: [findDocumentsPackagesForValidation](#)

Responses

Status Code	Description	Content-Type	Schema
200	Packages retrieved successfully	application/json	Object

3.4 PUT/documents/set-docs-validation-status

Overview: Set documents validation status

Description: Updates validation status for documents

Controller: [Document](#)

Method: [setDocumentsValidationStatus](#)

Request Body

Required	Content-Type	Schema
Yes	application/json	List

Responses

Status Code	Description	Content-Type	Schema
200	Status updated successfully	application/json	Object

3.5 **GET** /documents/clones/find-by-original-ref/{proposalRef}

Overview: Search clones of original document

Description: Finds all clones of an original document

Controller: [Document](#)

Method: [searchClonesOfOriginalDocument](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
200	Clones found	application/json	LeosDocumentList

3.6 **PUT** /document/create-with-content

Overview: Create document from content

Description: Creates a new document with provided content

Controller: [Document](#)

Method: [createDocumentFromContent](#)

Request Body

Required	Content-Type	Schema
Yes	application/json	CreateDocumentRequest

Responses

Status Code	Description	Content-Type	Schema
200	Document created successfully	application/json	LeosDocument
500	Internal server error	application/json	object

3.7 DELETE/document/delete-by-ref/{docRef}

Overview: Delete document by reference

Description: Deletes a document by its reference

Controller: [Document](#)

Method: `deleteDocumentByRef`

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Document deleted successfully		
404	Document not found	application/json	object

3.8 PUT /document/update-metadata/{docRef}/{versionId}

Overview: Update document metadata

Description: Updates only document metadata without content

Controller: [Document](#)

Method: `updateDocumentMetadata`

Parameters

Name	In	Required	Type	Description
versionId	path	Yes	BigDecimal	Version ID
docRef	path	Yes	string	Document reference
latest	query	Yes	boolean	Latest version flag

Request Body

Required	Content-Type	Schema
Yes	application/json	UpdateDocumentRequest

Responses

Status Code	Description	Content-Type	Schema
200	Metadata updated successfully	application/json	LeosDocument
404	Document not found	application/json	object

3.9 GET/document/next-version-label

Overview: Get next version label

Description: Calculates the next version label

Controller: [Document](#)

Method: [getNextVersionLabel](#)

Parameters

Name	In	Required	Type	Description
versionType	query	Yes	string	Version type
oldVersion	query	Yes	string	Old version

Responses

Status Code	Description	Content-Type	Schema
200	Next version label calculated	application/json	string

3.10 PUT/document/create-with-source

Overview: Create document from source

Description: Creates a new document from an existing source document

Controller: [Document](#)

Method: [createDocumentFromSource](#)

Request Body

Required	Content-Type	Schema
Yes	application/json	CreateDocumentRequest

Responses

Status Code	Description	Content-Type	Schema
200	Document created successfully	application/json	LeosDocument
500	Internal server error	application/json	object

3.11 **GET**/documents/recent-minor-versions/{docRef}

Overview: Find recent minor versions

Description: Retrieves recent minor versions

Controller: [Document](#)

Method: [findRecentMinorVersions](#)

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference
lastMajorVersion	query	Yes	string	Last major version
startIndex	query	Yes	integer	Start index
maxResults	query	Yes	integer	Max results

Responses

Status Code	Description	Content-Type	Schema
200	Versions retrieved successfully	application/json	LeosDocumentList

3.12 **GET**/documents/find-by-collaborator/{userName}

Overview: Find documents by collaborator

Description: Retrieves documents for a specific user

Controller: [Document](#)

Method: [findDocumentsByUserName](#)

Parameters

Name	In	Required	Type	Description
role	query	Yes	string	User role
category	query	Yes	string	Document category
userName	path	Yes	string	User name

Responses

Status Code	Description	Content-Type	Schema
200	Documents retrieved successfully	application/json	LeosDocumentList

3.13 **PUT** /document/archive-version/{docRef}/{version}

Overview: Archive document version

Description: Archives a specific version of a document

Controller: [Document](#)

Method: [archiveDocumentVersion](#)

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference
version	path	Yes	string	Version label

Responses

Status Code	Description	Content-Type	Schema
200	Version archived successfully	application/json	LeosDocument
404	Version not found	application/json	object

3.14 **POST** /documents/find-by-filter

Overview: Find documents using filter

Description: Retrieves documents using filter criteria

Controller: [Document](#)

Method: [findDocumentsUsingFilter](#)

Parameters

Name	In	Required	Type	Description
packageName	query	No	string	Package name
startIndex	query	Yes	integer	Start index
maxResults	query	Yes	integer	Max results
fetchContent	query	No	boolean	Fetch content

Request Body

Required	Content-Type	Schema
Yes	application/json	FindDocumentsRequest

Responses

Status Code	Description	Content-Type	Schema
200	Documents retrieved successfully	application/json	LeosDocumentList

3.15 **POST**/documents/count-by-filter

Overview: Count documents using filter

Description: Counts documents matching filter criteria

Controller: [Document](#)

Method: [countDocumentsUsingFilter](#)

Parameters

Name	In	Required	Type	Description
packageName	query	No	string	Package name

Request Body

Required	Content-Type	Schema
Yes	application/json	FindDocumentsRequest

Responses

Status Code	Description	Content-Type	Schema
200	Count retrieved successfully	application/json	Object

3.16 **GET**/document/{docRef}/find-by-version/{versionLabel}

Overview: Find document by version label

Description: Retrieves a document by its version label

Controller: [Document](#)

Method: [findDocumentByVersion](#)

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference
versionLabel	path	Yes	string	Version label

Responses

Status Code	Description	Content-Type	Schema
200	Document found	application/json	LeosDocument

404	Document not found	application/json	object
-----	--------------------	------------------	--------

3.17 **GET**/documents/find-by-status/{status}

Overview: Find documents by status

Description: Retrieves documents by their status

Controller: [Document](#)

Method: [findDocumentByStatus](#)

Parameters

Name	In	Required	Type	Description
status	path	Yes	string	Document status

Responses

Status Code	Description	Content-Type	Schema
200	Documents retrieved successfully	application/json	LeosDocumentList

3.18 **GET**/document/find-version/{versionId}

Overview: Find document by version ID

Description: Retrieves a document by its version ID

Controller: [Document](#)

Method: [findDocumentById](#)

Parameters

Name	In	Required	Type	Description
versionId	path	Yes	BigDecimal	Version ID
category	query	Yes	string	Document category
latest	query	Yes	boolean	Latest version flag

Responses

Status Code	Description	Content-Type	Schema
200	Document found	application/json	LeosDocument
404	Document not found	application/json	object

3.19 **POST**/document/search-versions/{ref}

Overview: Search document versions

Description: Searches for document versions by reference and user logins

Controller: [Document](#)

Method: [searchVersions](#)

Parameters

Name	In	Required	Type	Description
ref	path	Yes	string	Document reference
versionType	query	Yes	string	Version type

Request Body

Required	Content-Type	Schema
Yes	application/json	List

Responses

Status Code	Description	Content-Type	Schema
200	Versions found	application/json	LeosDocumentList

3.20 **PUT**/document/update-content/{versionId}

Overview: Update document content

Description: Updates document content and metadata

Controller: [Document](#)

Method: [updateDocument](#)

Parameters

Name	In	Required	Type	Description
versionId	path	Yes	BigDecimal	Version ID

Request Body

Required	Content-Type	Schema
Yes	application/json	UpdateDocumentRequest

Responses

Status Code	Description	Content-Type	Schema
200	Document updated successfully	application/json	LeosDocument

404	Document not found	application/json	object
-----	--------------------	------------------	--------

3.21 **GET**/document/archive/{docRef}

Overview: Archive document

Description: Archives a document by its reference

Controller: [Document](#)

Method: [archiveDocument](#)

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference
userId	query	Yes	string	User ID

Responses

Status Code	Description	Content-Type	Schema
200	Document archived successfully	application/json	LeosDocument
404	Document not found	application/json	object

3.22 **DELETE**/document/delete-by-id/{versionId}

Overview: Delete document by version ID

Description: Deletes a document by its version ID

Controller: [Document](#)

Method: [deleteDocumentById](#)

Parameters

Name	In	Required	Type	Description
versionId	path	Yes	BigDecimal	Version ID

Responses

Status Code	Description	Content-Type	Schema
200	Document deleted successfully		
404	Document not found	application/json	object

3.23 **GET**/documents/last-version/{docRef}

Overview: Find document by reference

Description: Retrieves the latest version of a document by reference

Controller: [Document](#)

Method: [findDocumentsByRef](#)

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference
category	query	Yes	string	Document category
withContent	query	Yes	boolean	Include content

Responses

Status Code	Description	Content-Type	Schema
200	Document found	application/json	LeosDocument

3.24 **GET**/documents/find-by-name/{name}

Overview: Find document by name

Description: Retrieves a document by its name

Controller: [Document](#)

Method: [findDocumentByName](#)

Parameters

Name	In	Required	Type	Description
name	path	Yes	string	Document name

Responses

Status Code	Description	Content-Type	Schema
200	Document found	application/json	LeosDocument
404	Document not found	application/json	object

3.25 **GET**/documents/count-all-majors/{docRef}

Overview: Count all major versions

Description: Counts all major versions of a document

Controller: [Document](#)

Method: `getAllMajorsCount`

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Count retrieved successfully	application/json	integer

3.26 **GET**/documents/first-version/{docRef}

Overview: Find first version

Description: Retrieves the first version of a document

Controller: [Document](#)

Method: `findFirstVersion`

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Version found	application/json	LeosDocument
404	Version not found	application/json	object

3.27 **GET**/documents/all-majors/{docRef}

Overview: Find all major versions

Description: Retrieves all major versions of a document

Controller: [Document](#)

Method: `findAllMajors`

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference
startIndex	query	Yes	integer	Start index
maxResults	query	Yes	integer	Max results

Responses

Status Code	Description	Content-Type	Schema
200	Versions retrieved successfully	application/json	LeosDocumentList

3.28 **GET**/document/all-versions/{docRef}

Overview: Find all versions

Description: Retrieves all versions of a document

Controller: [Document](#)

Method: `findAllVersionsByDocumentRef`

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Versions retrieved successfully	application/json	LeosDocumentList

3.29 **GET**/documents/count-recent-minor-versions/{docRef}

Overview: Count recent minor versions

Description: Counts recent minor versions

Controller: [Document](#)

Method: [getRecentMinorVersionsCount](#)

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference
versionLabel	query	Yes	string	Version label

Responses

Status Code	Description	Content-Type	Schema
200	Count retrieved successfully	application/json	integer

3.30 **GET**/documents/count-all-minors-for-intermediate/{docRef}

Overview: Count all minors for intermediate

Description: Counts minor versions for an intermediate version

Controller: [Document](#)

Method: [getAllMinorsCountForIntermediate](#)

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference
currIntVersion	query	Yes	string	Current intermediate version

Responses

Status Code	Description	Content-Type	Schema
200	Count retrieved successfully	application/json	integer

3.31 **GET**/documents/latest-major-version/{docRef}

Overview: Find latest major version

Description: Retrieves the latest major version of a document

Controller: [Document](#)

Method: [findLatestMajorVersionByRef](#)

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Version found	application/json	LeosDocument
404	Version not found	application/json	object

3.32 **GET**/documents/all-minors-for-intermediate/{docRef}

Overview: Find all minors for intermediate

Description: Retrieves minor versions for an intermediate version

Controller: [Document](#)

Method: [findAllMinorsForIntermediate](#)

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference
currIntVersion	query	Yes	string	Current intermediate version
startIndex	query	Yes	integer	Start index
maxResults	query	Yes	integer	Max results

Responses

Status Code	Description	Content-Type	Schema
200	Versions retrieved successfully	application/json	LeosDocumentList

4. LeosClient

4.1 GET /leos-client

Overview: Get LEOS client

Description: Retrieves LEOS client information by client name and optional technical user

Controller: [LeosClient](#)

Method: [getLeosClient](#)

Parameters

Name	In	Required	Type	Description
clientName	query	Yes	string	Client name
technicalUser	query	No	string	Technical user

Responses

Status Code	Description	Content-Type	Schema
200	Client information retrieved successfully	application/json	Object
404	Client not found	application/json	object

5. Package

5.1 GET /package/find-favourite-packages/{userName}

Overview: Find favourite packages

Description: Retrieves favourite packages for a user

Controller: [Package](#)

Method: [findFavouritePackagesForUser](#)

Parameters

Name	In	Required	Type	Description
userName	path	Yes	string	User name

Responses

Status Code	Description	Content-Type	Schema
-------------	-------------	--------------	--------

200	Favourite packages retrieved successfully	application/json	List
-----	---	------------------	------

5.2 **GET**/package/find-by-linked-pkg-id/{linkedPkgId}

Overview: Get linked packages by linked package ID

Description: Retrieves packages linked to a specific package

Controller: [Package](#)

Method: `getLinkedPackagesByLinkedPkgId`

Parameters

Name	In	Required	Type	Description
linkedPkgId	path	Yes	string	Linked package ID

Responses

Status Code	Description	Content-Type	Schema
200	Linked packages retrieved successfully	application/json	LinkedPackageList

5.3 **GET**/package/package-collaborators/{packageId}

Overview: Get package collaborators

Description: Retrieves all collaborators for a package

Controller: [Package](#)

Method: `getPackageCollaborators`

Parameters

Name	In	Required	Type	Description
packageId	path	Yes	BigDecimal	Package ID

Responses

Status Code	Description	Content-Type	Schema
200	Collaborators retrieved successfully	application/json	Object

5.4 **POST**/package/package-collaborators/{packageId}

Overview: Delete package collaborators

Description: Removes collaborators from a package

Controller: [Package](#)

Method: [deletePackageCollaborators](#)

Parameters

Name	In	Required	Type	Description
packageId	path	Yes	BigDecimal	Package ID

Request Body

Required	Content-Type	Schema
Yes	application/json	List

Responses

Status Code	Description	Content-Type	Schema
200	Collaborators deleted successfully	application/json	Object

5.5 **GET**/package/find-by-document-ref/{docRef}

Overview: Find package by document reference

Description: Retrieves a package by document reference

Controller: [Package](#)

Method: [findPackageByDocumentRef](#)

Parameters

Name	In	Required	Type	Description
docRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Package found	application/json	Package
404	Package not found	application/json	object

5.6 GET/package/find-by-document-id/{id}

Overview: Get package by document ID

Description: Retrieves a package by document version ID

Controller: [Package](#)

Method: `getPackageByDocumentId`

Parameters

Name	In	Required	Type	Description
id	path	Yes	string	Document ID

Responses

Status Code	Description	Content-Type	Schema
200	Package found	application/json	Package
404	Package not found	application/json	object

5.7 GET/package/find-by-id/{id}/documents

Overview: Find documents by package ID (simple)

Description: Retrieves all documents within a package by ID

Controller: [Package](#)

Method: `findDocumentsByPackageId`

Parameters

Name	In	Required	Type	Description
id	path	Yes	BigDecimal	Package ID
fetchContent	query	No	boolean	Fetch content

Responses

Status Code	Description	Content-Type	Schema
200	Documents retrieved successfully	application/json	LeosDocumentList
404	No documents found	application/json	object

5.8 **POST**/package/find-by-id/{id}/documents

Overview: Find documents by package ID

Description: Retrieves documents within a package by ID with filter

Controller: [Package](#)

Method: [findDocumentsByPackageId](#)

Parameters

Name	In	Required	Type	Description
id	path	Yes	BigDecimal	Package ID
descendants	query	No	boolean	Include descendants
fetchContent	query	No	boolean	Fetch content

Request Body

Required	Content-Type	Schema
Yes	application/json	FindDocumentsRequest

Responses

Status Code	Description	Content-Type	Schema
200	Documents retrieved successfully	application/json	LeosDocumentList
404	No documents found	application/json	object

5.9 **GET**/package/{ref}/get-favourite-package/{userName}

Overview: Get favourite package

Description: Retrieves a specific favourite package for a user

Controller: [Package](#)

Method: [getFavouritePackage](#)

Parameters

Name	In	Required	Type	Description
userName	path	Yes	string	User name
ref	path	Yes	string	Package reference

Responses

Status Code	Description	Content-Type	Schema
200	Favourite package retrieved successfully	application/json	PackagesFavorites

5.10 **GET**/package/find-by-pkg-id/{pkgId}

Overview: Get linked packages by package ID

Description: Retrieves linked packages for a given package ID

Controller: [Package](#)

Method: [getLinkedPackagesByPkgId](#)

Parameters

Name	In	Required	Type	Description
pkgId	path	Yes	string	Package ID

Responses

Status Code	Description	Content-Type	Schema
200	Linked packages retrieved successfully	application/json	LinkedPackageList

5.11 **POST**/package/package-collaborators/{packageId}/{userName}

Overview: Add package collaborators

Description: Adds collaborators to a package

Controller: [Package](#)

Method: [addPackageCollaborators](#)

Parameters

Name	In	Required	Type	Description
packageId	path	Yes	BigDecimal	Package ID
userName	path	Yes	string	User name

Request Body

Required	Content-Type	Schema
Yes	application/json	List

Responses

Status Code	Description	Content-Type	Schema
200	Collaborators added successfully	application/json	Object

5.12 GET /package/find-recent-packages-by-user/{userName}/{numberOfRecentPackages}

Overview: Find recent packages for user

Description: Retrieves recently changed packages for a user

Controller: [Package](#)

Method: [findRecentPackagesForUser](#)

Parameters

Name	In	Required	Type	Description
userName	path	Yes	string	User name
numberOfRecentPackages	path	Yes	BigDecimal	Number of recent packages

Responses

Status Code	Description	Content-Type	Schema
200	Recent packages retrieved successfully	application/json	List

5.13 PUT /package/{ref}/toggle-favourite-package/{userName}

Overview: Toggle favourite package

Description: Adds or removes a package from user's favourites

Controller: [Package](#)

Method: [toggleFavouritePackage](#)

Parameters

Name	In	Required	Type	Description
userName	path	Yes	string	User name
ref	path	Yes	string	Package reference

Responses

Status Code	Description	Content-Type	Schema
200	Favourite status toggled successfully	application/json	PackagesFavorites

5.14 **POST**/package/find-by-name/documents

Overview: Find documents by package name

Description: Retrieves documents within a package by name

Controller: [Package](#)

Method: [findDocumentsByPackageName](#)

Parameters

Name	In	Required	Type	Description
name	query	No	string	Package name
descendants	query	No	boolean	Include descendants
fetchContent	query	No	boolean	Fetch content

Request Body

Required	Content-Type	Schema
Yes	application/json	FindDocumentsRequest

Responses

Status Code	Description	Content-Type	Schema
200	Documents retrieved successfully	application/json	LeosDocumentList
404	No documents found	application/json	object

5.15 **POST**/package/create/{name}

Overview: Create package

Description: Creates a new package with specified configuration

Controller: [Package](#)

Method: [createPackage](#)

Parameters

Name	In	Required	Type	Description
name	path	Yes	string	Package name

Request Body

Required	Content-Type	Schema
Yes	application/json	CreatePackageRequest

Responses

Status Code	Description	Content-Type	Schema
200	Package created successfully	application/json	Package
404	Error creating package	application/json	object

5.16 **DELETE**/package/delete/{name}

Overview: Delete package

Description: Deletes a package by name

Controller: [Package](#)

Method: `deletePackage`

Parameters

Name	In	Required	Type	Description
name	path	Yes	string	Package name

Responses

Status Code	Description	Content-Type	Schema
200	Package deleted successfully		
404	Package not found	application/json	object

5.17 **GET**/package/find-by-name/{name}

Overview: Get package by name

Description: Retrieves a package by its name

Controller: [Package](#)

Method: `getPackageByName`

Parameters

Name	In	Required	Type	Description
name	path	Yes	string	Package name

Responses

Status Code	Description	Content-Type	Schema
200	Package found	application/json	Package
404	Package not found	application/json	object

5.18 **GET** /package/find-by-id/{id}

Overview: Get package by ID

Description: Retrieves a package by its ID

Controller: [Package](#)

Method: `getPackageById`

Parameters

Name	In	Required	Type	Description
id	path	Yes	string	Package ID

Responses

Status Code	Description	Content-Type	Schema
200	Package found	application/json	Package
404	Package not found	application/json	object

6. WorkflowCollaboratorConfig

6.1 **GET** /workflow-collaborator-config

Overview: Get workflow collaborator configuration

Description: Retrieves workflow collaborator configuration by package name and client name

Controller: [WorkflowCollaboratorConfig](#)

Method: `getWorkflowCollaboratorConfig`

Parameters

Name	In	Required	Type	Description
packageName	query	Yes	string	Package name
clientName	query	Yes	string	Client name

Responses

Status Code	Description	Content-Type	Schema
200	Configuration retrieved successfully	application/json	Object
404	Configuration not found	application/json	object
