

LEOS SERVICE API

API documentation for LEOS core services

Version: 5.6.0-SNAPSHOT

1. Actuator

1.1 GET /health

Overview: Get application health

Description: Retrieves application health status including database and component checks

Controller: [Actuator](#)

Method: `health`

Responses

Status Code	Description	Content-Type	Schema
200	Application is healthy	application/json	Map
503	Service unavailable	application/json	object

2. Memorandum Management

2.1 PUT /{documentRef}/save-after-replace

Overview: Save after replace

Description: Saves the memorandum document after text replacement operations

Controller: [Memorandum Management](#)

Method: `saveAllAfterReplace`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	SaveAfterReplaceRequest

Responses

Status Code	Description	Content-Type	Schema
200	Document saved successfully	application/json	Object
500	Internal server error		

2.2 GET /{documentRef}/restore/{targetVersion}

Overview: Restore memorandum version

Description: Restores the memorandum to a specific previous version

Controller: [Memorandum Management](#)

Method: `restoreMemorandumVersion`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
targetVersion	path	Yes	string	Target version

Responses

Status Code	Description	Content-Type	Schema
200	Version restored successfully	application/json	Object
500	Internal server error		

2.3 GET /{documentRef}/version-data

Overview: Get major versions data

Description: Retrieves major versions with pagination

Controller: [Memorandum Management](#)

Method: `getMajorVersionsData`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
pageIndex	query	Yes	integer	Page index
pageSize	query	Yes	integer	Page size

Responses

Status Code	Description	Content-Type	Schema
200	Versions retrieved successfully	application/json	Object
500	Internal server error		

2.4 GET /{documentRef}/download-version

Overview: Download current version

Description: Downloads the current version of the memorandum with optional annotations

Controller: [Memorandum Management](#)

Method: `downloadCurrentVersion`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
isWithAnnotation	query	Yes	boolean	Include annotations

Responses

Status Code	Description	Content-Type	Schema
200	Version downloaded successfully	application/json	Object
500	Internal server error		

2.5 GET /{newVersionId}/compare/{oldVersionId}

Overview: Compare memorandum versions

Description: Compares two versions of the memorandum and shows differences

Controller: [Memorandum Management](#)

Method: `compareMemorandumVersions`

Parameters

Name	In	Required	Type	Description
newVersionId	path	Yes	string	New version ID
oldVersionId	path	Yes	string	Old version ID

Responses

Status Code	Description	Content-Type	Schema
200	Comparison retrieved successfully	application/json	Object

500	Internal server error
-----	-----------------------

2.6 GET /{documentRef}/count-version-data

Overview: Count major versions

Description: Returns the total count of major versions

Controller: [Memorandum Management](#)

Method: `countMajorVersionsData`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Count retrieved successfully	application/json	Object
500	Internal server error		

2.7 GET /{documentRef}/download-clean-version

Overview: Download clean version

Description: Downloads a clean version of the memorandum without track changes

Controller: [Memorandum Management](#)

Method: `downloadCleanVersion`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Clean version downloaded successfully	application/json	Object
500	Internal server error		

2.8 **POST**/{documentRef}/toggle-trackchange-enabled

Overview: Toggle track change enabled

Description: Enables or disables track changes mode for the memorandum document

Controller: [Memorandum Management](#)

Method: [toggleTrackChangeEnabled](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	ToggleTrackChangeEnabledRequest

Responses

Status Code	Description	Content-Type	Schema
200	Track change toggled successfully	application/json	Object
500	Internal server error		

2.9 **GET**/{documentRef}/intermediate-version-data

Overview: Get intermediate version data

Description: Retrieves intermediate versions between major versions with pagination

Controller: [Memorandum Management](#)

Method: [getIntermediateVersionData](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
currIntVersion	query	Yes	string	Current intermediate version
pageIndex	query	Yes	integer	Page index
pageSize	query	Yes	integer	Page size

Responses

Status Code	Description	Content-Type	Schema
200	Versions retrieved successfully	application/json	Object

500	Internal server error
-----	-----------------------

2.10 GET /{documentRef}/count-intermediate-version-data

Overview: Count intermediate versions

Description: Returns the total count of intermediate versions

Controller: [Memorandum Management](#)

Method: `countIntermediateVersionData`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
currIntVersion	query	Yes	string	Current intermediate version

Responses

Status Code	Description	Content-Type	Schema
200	Count retrieved successfully	application/json	Object
500	Internal server error		

2.11 PUT /{documentRef}/element/{elementName}/{elementId}/save-element

Overview: Save memorandum element

Description: Saves changes to a specific element in the memorandum document

Controller: [Memorandum Management](#)

Method: `saveMemorandumElement`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
elementName	path	Yes	string	Element name
elementId	path	Yes	string	Element ID
presenterId	header	Yes	string	Presenter ID
isSplit	query	No	boolean	Is split

Request Body

Required	Content-Type	Schema
Yes	application/json	String

Responses

Status Code	Description	Content-Type	Schema
200	Element saved successfully	application/json	Object
500	Internal server error		

2.12 **POST**/{documentRef}/save-version

Overview: Save memorandum version

Description: Creates a new version of the memorandum with a check-in comment

Controller: [Memorandum Management](#)

Method: [saveMemorandumVersion](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	SaveIntermediateVersionRequest

Responses

Status Code	Description	Content-Type	Schema
200	Version saved successfully	application/json	Object
500	Internal server error		

2.13 **GET**/{documentRef}/search-versions

Overview: Search versions

Description: Searches for versions by author and version type

Controller: [Memorandum Management](#)

Method: [searchVersionData](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

authorKey	query	Yes	string	Author key
type	query	Yes	string	Version type

Responses

Status Code	Description	Content-Type	Schema
200	Versions retrieved successfully	application/json	Object
500	Internal server error		

2.14 GET /{documentRef}/getTocItems

Overview: Get TOC items

Description: Retrieves available table of contents item types for the memorandum

Controller: [Memorandum Management](#)

Method: `getTocItems`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	TOC items retrieved successfully	application/json	Object
500	Internal server error		

2.15 PUT /{documentRef}/element/{elementName}/{elementId}/insert-element

Overview: Insert memorandum element

Description: Inserts a new element into the memorandum document at the specified position

Controller: [Memorandum Management](#)

Method: `insertMemorandumElement`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
elementName	path	Yes	string	Element name
elementId	path	Yes	string	Element ID

Request Body

Required	Content-Type	Schema
Yes	application/json	InsertElementRequest

Responses

Status Code	Description	Content-Type	Schema
200	Element inserted successfully	application/json	Object
500	Internal server error		

2.16 **DELETE**/{documentRef}/element/{elementName}/{elementId}

Overview: Delete memorandum element

Description: Deletes a specific element from the memorandum document

Controller: [Memorandum Management](#)

Method: `deleteMemorandumElement`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
elementName	path	Yes	string	Element name
elementId	path	Yes	string	Element ID

Responses

Status Code	Description	Content-Type	Schema
200	Element deleted successfully	application/json	Object
500	Internal server error		

2.17 **POST**/{documentRef}/search-text

Overview: Search text in document

Description: Searches for text matches in the memorandum document with specified criteria

Controller: [Memorandum Management](#)

Method: `getSearchResults`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

searchText	query	Yes	string	Search text
matchCase	query	Yes	boolean	Match case
completeWords	query	Yes	boolean	Complete words

Request Body

Required	Content-Type	Schema
No	application/json	String

Responses

Status Code	Description	Content-Type	Schema
200	Search results retrieved successfully	application/json	Object
500	Internal server error		

2.18 **GET** /{documentRef}/element/{elementId}/{elementTagName}

Overview: Get memorandum element

Description: Retrieves a specific element from the memorandum for editing

Controller: [Memorandum Management](#)

Method: `getMemorandumElement`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
elementId	path	Yes	string	Element ID
elementTagName	path	Yes	string	Element tag name

Responses

Status Code	Description	Content-Type	Schema
200	Element retrieved successfully	application/json	Object
500	Internal server error		

2.19 **GET**/{documentRef}/recent-changes

Overview: Get recent changes

Description: Retrieves recent minor version changes with pagination

Controller: [Memorandum Management](#)

Method: `getRecentChanges`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
pageIndex	query	Yes	integer	Page index
pageSize	query	Yes	integer	Page size

Responses

Status Code	Description	Content-Type	Schema
200	Recent changes retrieved successfully	application/json	Object
500	Internal server error		

2.20 **GET**/{documentRef}/count-recent-changes

Overview: Count recent changes

Description: Returns the total count of recent minor version changes

Controller: [Memorandum Management](#)

Method: `countRecentChanges`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Count retrieved successfully	application/json	Object
500	Internal server error		

2.21 PUT /{documentRef}/element/{elementName}/{elementId}/merge-element

Overview: Merge memorandum element

Description: Merges the specified element with adjacent elements in the memorandum

Controller: [Memorandum Management](#)

Method: `mergeMemorandumElement`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
elementName	path	Yes	string	Element tag
elementId	path	Yes	string	Element ID

Request Body

Required	Content-Type	Schema
Yes	application/json	String

Responses

Status Code	Description	Content-Type	Schema
200	Element merged successfully	application/json	Object
500	Internal server error		

2.22 GET /{versionId}/show-version

Overview: Show memorandum version

Description: Retrieves and displays a specific version of the memorandum

Controller: [Memorandum Management](#)

Method: `showMemorandumVersion`

Parameters

Name	In	Required	Type	Description
versionId	path	Yes	string	Version ID

Responses

Status Code	Description	Content-Type	Schema
200	Version retrieved successfully	application/json	Object
500	Internal server error		

2.23 GET /{documentRef}/download-xml-version

Overview: Download XML version

Description: Downloads the XML files for a specific version of the memorandum

Controller: [Memorandum Management](#)

Method: `downloadXmlVersion`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
versionId	query	Yes	string	Version ID

Responses

Status Code	Description	Content-Type	Schema
200	XML version downloaded successfully	application/json	Object
500	Internal server error		

2.24 PUT /{documentRef}/replace-one

Overview: Replace one text occurrence

Description: Replaces a single text occurrence in the memorandum document

Controller: [Memorandum Management](#)

Method: `replaceOneText`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	ReplaceMatchRequest

Responses

Status Code	Description	Content-Type	Schema
200	Text replaced successfully	application/json	Object
500	Internal server error		

2.25 PUT /{documentRef}/replace-all

Overview: Replace all text occurrences

Description: Replaces all occurrences of text in the memorandum document

Controller: [Memorandum Management](#)

Method: `replaceAllText`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	ReplaceAllMatchRequest

Responses

Status Code	Description	Content-Type	Schema
200	Text replaced successfully	application/json	Object
500	Internal server error		

2.26 GET /{documentRef}/clean-version

Overview: Show clean version

Description: Displays a clean version of the memorandum without track changes

Controller: [Memorandum Management](#)

Method: `showCleanVersion`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Clean version retrieved successfully	application/json	Object
500	Internal server error		

2.27 GET/{documentRef}/userGuidance

Overview: Get user guidance

Description: Retrieves user guidance content for the memorandum document

Controller: [Memorandum Management](#)

Method: `getUserGuidance`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	User guidance retrieved successfully	application/json	Object
500	Internal server error		

2.28 GET/{documentRef}/document-config

Overview: Get document configuration

Description: Retrieves configuration settings for the memorandum document

Controller: [Memorandum Management](#)

Method: `getDocumentConfig`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Configuration retrieved successfully	application/json	Object
500	Internal server error		

2.29 **POST**/documentRef/save-toc

Overview: Save table of contents

Description: Saves changes to the memorandum table of contents structure

Controller: [Memorandum Management](#)

Method: [saveMemorandumToc](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	SaveTocRequestEvent

Responses

Status Code	Description	Content-Type	Schema
200	TOC saved successfully	application/json	Object
500	Internal server error		

2.30 **GET**/documentRef

Overview: Get memorandum document

Description: Retrieves the memorandum document with its content and metadata

Controller: [Memorandum Management](#)

Method: [getMemorandum](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Memorandum retrieved successfully	application/json	Object
500	Internal server error		

2.31 **GET** /{documentRef}/getToc

Overview: Get table of contents

Description: Retrieves the table of contents for the memorandum in the specified mode

Controller: [Memorandum Management](#)

Method: `getToc`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
tocMode	query	Yes	TocMode	TOC mode

Responses

Status Code	Description	Content-Type	Schema
200	TOC retrieved successfully	application/json	Object
500	Internal server error		

3. Annex

3.1 **GET** /{documentRef}/switch-annex-structure

Overview: Switch annex structure

Description: Switches the annex structure type

Controller: [Annex](#)

Method: `switchAnnexStructure`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Structure switched successfully	application/json	Object
500	Internal server error	application/json	object

4. Bill

4.1 **PUT** /{documentRef}/renumber-document

Overview: Renumber bill

Description: Renumbers the bill document

Controller: [Bill](#)

Method: [renumberBill](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Bill renumbered successfully	application/json	Object
500	Internal server error	application/json	object

4.2 **GET** /{documentRef}/accept-change/{elementId}/{elementTagName}

Overview: Accept change

Description: Accepts a track change

Controller: [Bill](#)

Method: [acceptChange](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
elementId	path	Yes	string	Element ID
elementTagName	path	Yes	string	Element tag name
trackChangeAction	query	Yes	string	Track change action
presenterId	header	Yes	string	Presenter ID

Responses

Status Code	Description	Content-Type	Schema
200	Change accepted successfully	application/json	Object

500	Internal server error	application/json	object
-----	-----------------------	------------------	--------

4.3 PUT /{documentRef}/import-elements

Overview: Import elements

Description: Imports elements into the bill document

Controller: [Bill](#)

Method: [importElements](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	ImportElementRequest

Responses

Status Code	Description	Content-Type	Schema
200	Elements imported successfully	application/json	Object
500	Internal server error	application/json	object

4.4 PUT /{documentRef}/search-for-import

Overview: Search for import

Description: Searches for import from journal

Controller: [Bill](#)

Method: [searchForImportFromJournal](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	SearchForImportCriteriaRequest

Responses

Status Code	Description	Content-Type	Schema
200	Search completed successfully	application/json	Object
500	Internal server error	application/json	object

5. Financial Statement

5.1 **GET** /{documentRef}/reject-change/{elementId}/{elementTagName}

Overview: Reject change

Description: Rejects a specific track change in the financial statement document

Controller: [Financial Statement](#)

Method: `rejectChange`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
elementId	path	Yes	string	Element ID
elementTagName	path	Yes	string	Element tag name
trackChangeAction	query	Yes	string	Track change action
presenterId	header	Yes	string	Presenter ID

Responses

Status Code	Description	Content-Type	Schema
200	Change rejected successfully	application/json	Object
400	Bad request		
500	Internal server error		

5.2 GET/{reference}

Overview: Get document by reference

Description: Retrieves the financial statement document with its content and metadata

Controller: [Financial Statement](#)

Method: `getDocumentByRef`

Parameters

Name	In	Required	Type	Description
reference	path	Yes	string	Reference

Responses

Status Code	Description	Content-Type	Schema
200	Document retrieved successfully	application/json	DocumentViewResponse
400	Bad request		
500	Internal server error		

5.3 POST/{documentRef}/finalise-document

Overview: Finalise document

Description: Finalises the financial statement document by accepting all track changes

Controller: [Financial Statement](#)

Method: `finaliseDocument`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Document finalised successfully	application/json	Object
400	Bad request		
500	Internal server error		

5.4 PUT /{documentRef}/element/{elementName}/{elementId}/insert-group

Overview: Insert group

Description: Inserts a new group element into the financial statement document at the spec...

Controller: [Financial Statement](#)

Method: [insertGroup](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
elementName	path	Yes	string	Element name
elementId	path	Yes	string	Element ID

Request Body

Required	Content-Type	Schema
Yes	application/json	InsertElementRequest

Responses

Status Code	Description	Content-Type	Schema
200	Group inserted successfully	application/json	Object
400	Bad request		
500	Internal server error		

6. Annotation

6.1 GET /requestDocumentMetadata/{documentType}/{documentRef}

Overview: Request document metadata

Description: Retrieves document metadata for annotations

Controller: [Annotation](#)

Method: [requestDocumentMetadata](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Metadata retrieved successfully	application/json	Object
500	Internal server error	application/json	object

6.2 GET/requestSearchMetadata

Overview: Request search metadata

Description: Retrieves search metadata for annotations

Controller: [Annotation](#)

Method: `requestSearchMetadata`

Responses

Status Code	Description	Content-Type	Schema
200	Metadata retrieved successfully	application/json	Object
500	Internal server error	application/json	object

6.3 POST/requestMergeSuggestion/{documentType}/{documentRef}

Overview: Request merge suggestion

Description: Merges a single annotation suggestion

Controller: [Annotation](#)

Method: `requestMergeSuggestion`

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	AnnotateMergeSuggestionRequest

Responses

Status Code	Description	Content-Type	Schema
200	Suggestion merged successfully	application/json	Object
500	Internal server error	application/json	object

6.4 **GET**/requestUserPermissions/{documentType}/{documentRef}

Overview: Request user permissions

Description: Retrieves user permissions for a document

Controller: [Annotation](#)

Method: [requestUserPermissions](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Permissions retrieved successfully	application/json	Object
500	Internal server error	application/json	object

6.5 **GET**/requestSecurityToken

Overview: Request security token

Description: Retrieves annotation security token

Controller: [Annotation](#)

Method: [requestSecurityToken](#)

Responses

Status Code	Description	Content-Type	Schema
200	Token retrieved successfully	application/json	Object
500	Internal server error	application/json	object

6.6 **POST**/requestMergeSuggestions/{documentType}/{documentRef}

Overview: Request merge suggestions

Description: Merges multiple annotation suggestions

Controller: [Annotation](#)

Method: [requestMergeSuggestions](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	AnnotateMergeSuggestionRequests

Responses

Status Code	Description	Content-Type	Schema
200	Suggestions merged successfully	application/json	Object
500	Internal server error	application/json	object

7. Catalog

7.1 [POST](#)/update-template/{packageId}

Overview: Update template

Description: Updates an existing template in the catalog

Controller: [Catalog](#)

Method: [updateTemplate](#)

Parameters

Name	In	Required	Type	Description
packageId	path	Yes	string	Package ID

Request Body

Required	Content-Type	Schema
Yes	application/json	PublishTemplateRequest

Responses

Status Code	Description	Content-Type	Schema
200	Template updated successfully	application/json	Object
500	Internal server error	application/json	object

7.2 GET /template/{proposalRef}

Overview: Get template info

Description: Retrieves template information for a proposal

Controller: [Catalog](#)

Method: [getTemplateInfo](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
200	Template info retrieved successfully	application/json	Object
500	Internal server error	application/json	object

7.3 POST /un-publish-template/{catalogKey}

Overview: Unpublish template

Description: Unpublishes a template from the catalog

Controller: [Catalog](#)

Method: [unPublishTemplate](#)

Parameters

Name	In	Required	Type	Description
catalogKey	path	Yes	string	Catalog key

Responses

Status Code	Description	Content-Type	Schema
200	Template unpublished successfully	application/json	Object
500	Internal server error	application/json	object

7.4 **POST**/publish-template/{legFileId}

Overview: Publish template to catalog

Description: Publishes a template to the catalog for specified DGs

Controller: [Catalog](#)

Method: [publishTemplateToCatalog](#)

Parameters

Name	In	Required	Type	Description
legFileId	path	Yes	string	LEG file ID

Request Body

Required	Content-Type	Schema
Yes	application/json	PublishTemplateRequest

Responses

Status Code	Description	Content-Type	Schema
200	Template published successfully	application/json	Object
400	Pending translations exist	application/json	object
500	Internal server error	application/json	object

8. Collaborator

8.1 **GET**/proposalRef/collaborators

Overview: Get all collaborators

Description: Retrieves all collaborators from a proposal

Controller: [Collaborator](#)

Method: [getAllCollaboratorFromProposal](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
200	Collaborators retrieved successfully	application/json	Object

400	Bad request	application/json	object
500	Internal server error	application/json	object

8.2 PUT /{proposalRef}/collaborators

Overview: Edit collaborator

Description: Edits a collaborator in a proposal

Controller: [Collaborator](#)

Method: [editCollaboratorFromProposal](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Request Body

Required	Content-Type	Schema
Yes	application/json	CollaboratorRequest

Responses

Status Code	Description	Content-Type	Schema
204	Collaborator updated successfully		
400	Bad request	application/json	object
500	Internal server error	application/json	object

8.3 POST /{proposalRef}/collaborators

Overview: Add collaborator

Description: Adds a collaborator to a proposal

Controller: [Collaborator](#)

Method: [addCollaboratorToProposal](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Request Body

Required	Content-Type	Schema
Yes	application/json	CollaboratorRequest

Responses

Status Code	Description	Content-Type	Schema
204	Collaborator added successfully		
400	Bad request	application/json	object
500	Internal server error	application/json	object

8.4 **DELETE**/{proposalRef}/collaborators

Overview: Remove collaborator

Description: Removes a collaborator from a proposal

Controller: [Collaborator](#)

Method: `removeCollaboratorFromProposal`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Request Body

Required	Content-Type	Schema
Yes	application/json	CollaboratorRequest

Responses

Status Code	Description	Content-Type	Schema
204	Collaborator removed successfully		
400	Bad request	application/json	object
500	Internal server error	application/json	object

8.5 PUT /{proposalRef}/bulkCollaborators

Overview: Edit bulk collaborators

Description: Edits multiple collaborators in a proposal

Controller: [Collaborator](#)

Method: [editBulkCollaboratorsFromProposal](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Request Body

Required	Content-Type	Schema
Yes	application/json	CollaboratorsRequest

Responses

Status Code	Description	Content-Type	Schema
204	Collaborators updated successfully		
400	Bad request	application/json	object
500	Internal server error	application/json	object

8.6 POST /{proposalRef}/bulkCollaborators

Overview: Add bulk collaborators

Description: Adds multiple collaborators to a proposal

Controller: [Collaborator](#)

Method: [addBulkCollaboratorsToProposal](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Request Body

Required	Content-Type	Schema
Yes	application/json	CollaboratorsRequest

Responses

Status Code	Description	Content-Type	Schema
204	Collaborators added successfully		

400	Bad request	application/json	object
500	Internal server error	application/json	object

8.7 **DELETE**/proposalRef/bulkCollaborators

Overview: Remove bulk collaborators

Description: Removes multiple collaborators from a proposal

Controller: [Collaborator](#)

Method: `removeBulkCollaboratorsFromProposal`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Request Body

Required	Content-Type	Schema
Yes	application/json	CollaboratorsRequest

Responses

Status Code	Description	Content-Type	Schema
204	Collaborators removed successfully		
400	Bad request	application/json	object
500	Internal server error	application/json	object

9. Contribution

9.1 **POST**/merge-contributions/{documentRef}/{documentType}

Overview: Merge contribution

Description: Merges a contribution into the document

Controller: [Contribution](#)

Method: `mergeContribution`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

presenterId	header	Yes	string	Presenter ID
-------------	--------	-----	--------	--------------

Request Body

Required	Content-Type	Schema
Yes	application/json	ApplyContributionsRequest

Responses

Status Code	Description	Content-Type	Schema
200	Contribution merged successfully	application/json	MergeContributionResponse
500	Internal server error	application/json	object

9.2 [POST](#)/mark-as-processed/{contributionVersionRef}/{documentType}

Overview: Mark as processed

Description: Marks a contribution as processed

Controller: [Contribution](#)

Method: [markAsProcessed](#)

Parameters

Name	In	Required	Type	Description
contributionVersionRefpath		Yes	string	Contribution version reference
documentType	path	Yes	string	Document type

Responses

Status Code	Description	Content-Type	Schema
200	Contribution marked as processed successfully	application/json	Object

9.3 [POST](#)/milestones/sendFeedback

Overview: Send feedback

Description: Sends feedback for a contribution

Controller: [Contribution](#)

Method: [sendFeedback](#)

Request Body

Required	Content-Type	Schema
Yes	application/json	SendFeedbackRequest

Responses

Status Code	Description	Content-Type	Schema
200	Feedback sent successfully	application/json	Object
500	Internal server error	application/json	object

9.4 **GET** /{legFileName}/{proposalRef}/count-feedbacks/{versionedReference}

Overview: Count feedbacks

Description: Counts feedback annotations

Controller: [Contribution](#)

Method: [countFeedbacks](#)

Parameters

Name	In	Required	Type	Description
legFileName	path	Yes	string	LEG file name
versionedReference	path	Yes	string	Versioned reference
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
200	Feedbacks counted successfully	application/json	Object
500	Internal server error	application/json	object

9.5 **GET** /view-merge-pane/{documentRef}/{documentType}

Overview: View merge pane

Description: Views merge pane for contribution comparison

Controller: [Contribution](#)

Method: [viewMergePane](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
documentType	path	Yes	string	Document type
contributionVersionRefquery		Yes	string	Contribution version reference
legFileName	query	Yes	string	LEG file name

Responses

Status Code	Description	Content-Type	Schema
200	Merge pane retrieved successfully	application/json	DocumentViewResponse
500	Internal server error	application/json	object

9.6 **GET** /milestones/{proposalRef}/viewContribution/{legFileName}

Overview: Get milestone contribution

Description: Gets cloned milestone contribution

Controller: [Contribution](#)

Method: [getClonedMilestoneContribution](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
legFileName	path	Yes	string	LEG file name
legFileId	query	Yes	string	Original LEG file ID

Responses

Status Code	Description	Content-Type	Schema
200	Milestone contribution retrieved successfully	application/json	Object
500	Internal server error	application/json	object

9.7 **GET** /list-contributions/{documentRef}/{documentType}

Overview: List contributions

Description: Lists all contributions for a document

Controller: [Contribution](#)

Method: [listContributionsForDocument](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
documentType	path	Yes	string	Document type

Responses

Status Code	Description	Content-Type	Schema
200	Contributions retrieved successfully	application/json	Object

9.8 **POST**/revision-done/{proposalRef}

Overview: Update revision status

Description: Updates cloned proposal revision status

Controller: [Contribution](#)

Method: [updateClonedProposalRevisionStatus](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Request Body

Required	Content-Type	Schema
Yes	application/json	String

Responses

Status Code	Description	Content-Type	Schema
200	Revision status updated successfully	application/json	Object
400	Bad request	application/json	object

9.9 **GET**/milestones/reject-doc/{proposalRef}/{docRef}/{milestoneLegFileName}

Overview: Reject milestone document

Description: Rejects a document in milestone

Controller: [Contribution](#)

Method: [milestoneRejectAnnex](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
docRef	path	Yes	string	Document reference
milestoneLegFileName	path	Yes	string	Milestone LEG file name
isAdded	query	Yes	boolean	Is added

originalLegFileId	query	Yes	string	Original LEG file ID
-------------------	-------	-----	--------	----------------------

Responses

Status Code	Description	Content-Type	Schema
200	Document rejected successfully	application/json	Object
500	Internal server error	application/json	object

9.10 **POST**/create-clone-proposal/{legFileId}

Overview: Create clone proposal

Description: Creates a cloned proposal for contribution

Controller: [Contribution](#)

Method: [createCloneProposal](#)

Parameters

Name	In	Required	Type	Description
legFileId	path	Yes	string	LEG file ID

Request Body

Required	Content-Type	Schema
Yes	application/json	CloneProposalRequest

Responses

Status Code	Description	Content-Type	Schema
200	Clone proposal created successfully	application/json	Object
500	Internal server error	application/json	object

9.11 **GET**/milestones/accept-doc/{proposalRef}/{annexRef}/{legFileName}

Overview: Accept milestone document

Description: Accepts a document in milestone

Controller: [Contribution](#)

Method: [milestoneAcceptAnnex](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

annexRef	path	Yes	string	Annex reference
legFileName	path	Yes	string	LEG file name
originalLegFileId	query	Yes	string	Original LEG file ID
isAdded	query	Yes	boolean	Is added
docCategory	query	No	string	Document category

Responses

Status Code	Description	Content-Type	Schema
200	Document accepted successfully	application/json	Object
500	Internal server error	application/json	object

9.12 **POST**/decline-contributions/{documentVersionedRef}/{documentType}

Overview: Decline contribution

Description: Declines a contribution

Controller: [Contribution](#)

Method: [declineContribution](#)

Parameters

Name	In	Required	Type	Description
documentVersionedRef	path	Yes	string	Document versioned reference
documentType	path	Yes	string	Document type

Responses

Status Code	Description	Content-Type	Schema
200	Contribution declined successfully	application/json	DeclineContributionResponse

10. Document

10.1 **GET**/documentRef/fetch-toc-ancestors

Overview: Fetch TOC and ancestors

Description: Retrieves the table of contents and ancestor elements for specified element IDs

Controller: [Document](#)

Method: `fetchTocAndAncestors`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
elementIds	query	No	List	Element IDs

Responses

Status Code	Description	Content-Type	Schema
200	TOC and ancestors retrieved successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.2 **GET**/request-element/{documentRef}

Overview: Request element

Description: Retrieves a specific element from the document by ID and tag name

Controller: [Document](#)

Method: `requestElement`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
elementId	query	Yes	string	Element ID
elementTagName	query	Yes	string	Element tag name

Responses

Status Code	Description	Content-Type	Schema
200	Element fetched successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.3 **GET**/{documentType}/{documentRef}/baseVersion/{documentId}

Overview: Change base version

Description: Changes the base version of the document for comparison purposes

Controller: [Document](#)

Method: [changeBaseVersion](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type
documentRef	path	Yes	string	Document reference
documentId	path	Yes	string	Document ID
versionLabel	query	Yes	string	Version label
versionComment	query	Yes	string	Version comment

Responses

Status Code	Description	Content-Type	Schema
200	Base version changed successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.4 **POST**/upload-document

Overview: Upload document

Description: Uploads a new version of a document with check-in comment and version type

Controller: [Document](#)

Method: [uploadDocument](#)

Parameters

Name	In	Required	Type	Description
uploadedFile	query	Yes	MultipartFile	Uploaded file
checkinComment	query	Yes	string	Checkin comment
versionType	query	Yes	VersionType	Version type
documentRef	query	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Document uploaded successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.5 **POST**/export-to-econsilium/{documentType}/{documentRef}

Overview: Export to eConsilium

Description: Exports the document to eConsilium system with specified options

Controller: [Document](#)

Method: [exportToEconsilium](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	ExportToConsiliumRequest

Responses

Status Code	Description	Content-Type	Schema
200	Export successful	application/json	Object
400	Bad request		
500	Internal server error		

10.6 **POST**/double-compare/{documentType}/{documentRef}

Overview: Double compare

Description: Performs a double comparison between three document versions

Controller: [Document](#)

Method: [doubleCompare](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type

documentRef	path	Yes	string	Document reference
-------------	------	-----	--------	--------------------

Request Body

Required	Content-Type	Schema
Yes	application/json	DoubleCompareRequest

Responses

Status Code	Description	Content-Type	Schema
200	Comparison completed successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.7 **POST**/archive-version/{documentRef}/{version}

Overview: Archive version

Description: Archives a specific version of the document

Controller: [Document](#)

Method: [archiveVersion](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
version	path	Yes	string	Version

Responses

Status Code	Description	Content-Type	Schema
200	Version archived successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.8 GET /{legFileName}/{proposalRef}/stored-annotations/{documentRef}

Overview: Get stored annotations

Description: Retrieves stored annotations for a document using leg file name

Controller: [Document](#)

Method: [getStoredAnnotations](#)

Parameters

Name	In	Required	Type	Description
legFileName	path	Yes	string	LEG file name
documentRef	path	Yes	string	Document reference
proposalRef	path	Yes	string	Proposal reference
removeRevisionPrefix	query	Yes	boolean	Remove revision prefix

Responses

Status Code	Description	Content-Type	Schema
200	Annotations retrieved successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.9 GET /fetch-reference-label/{documentRef}

Overview: Fetch reference label

Description: Retrieves the display label for document references

Controller: [Document](#)

Method: [fetchReferenceLabel](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
references	query	Yes	List	References
currentElementId	query	Yes	string	Current element ID
capital	query	Yes	boolean	Capital

Responses

Status Code	Description	Content-Type	Schema
200	Label fetched successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.10 **POST** /export-compared-version-as-PDF/{documentType}/{documentRef}

Overview: Export compared version as PDF

Description: Exports the comparison between two document versions as a PDF file

Controller: [Document](#)

Method: [exportComparedVersionAsPDF](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	DownloadComparedVersionRequest

Responses

Status Code	Description	Content-Type	Schema
200	PDF exported successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.11 **GET** /{proposalRef}/stored-annotations/{documentRef}

Overview: Get stored annotations from ID

Description: Retrieves stored annotations for a document using leg file ID

Controller: [Document](#)

Method: [getStoredAnnotationsFromId](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

proposalRef	path	Yes	string	Proposal reference
legFileId	query	Yes	string	LEG file ID
removeRevisionPrefix	query	Yes	boolean	Remove revision prefix

Responses

Status Code	Description	Content-Type	Schema
200	Annotations retrieved successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.12 **POST**/downloadVersion/{documentType}/{documentRef}

Overview: Download version

Description: Downloads a specific version of the document in the requested format

Controller: [Document](#)

Method: [downloadVersion](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	DownloadVersionRequest

Responses

Status Code	Description	Content-Type	Schema
200	Version downloaded successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.13 **GET** /{proposalRef}/stored-annotations

Overview: Get stored annotations from versioned reference

Description: Retrieves stored annotations for a document using versioned reference

Controller: [Document](#)

Method: [getStoredAnnotationsFromVersionedRef](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
legFileName	query	No	string	LEG file name
versionedReference	query	Yes	string	Versioned reference
removeRevisionPrefix	query	Yes	boolean	Remove revision prefix

Responses

Status Code	Description	Content-Type	Schema
200	Annotations retrieved successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.14 **POST** /download-compared-version-as-docuwrite/{documentType}/{doc

Overview: Download compared version as Docuwrite

Description: Downloads the comparison between two document versions in Docuwrite format

Controller: [Document](#)

Method: [downloadComparedVersionAsDocuwrite](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	DownloadComparedVersionRequest

Responses

Status Code	Description	Content-Type	Schema
200	Docuwrite downloaded successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.15 **POST**/download-compared-version-XML/{documentType}/{documentRef}

Overview: Download compared version XML file

Description: Downloads an XML file containing the comparison between two document versions

Controller: [Document](#)

Method: [downloadComparedVersionXMLFile](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type
documentRef	path	Yes	string	Document reference

Request Body

Required	Content-Type	Schema
Yes	application/json	DownloadComparedVersionRequest

Responses

Status Code	Description	Content-Type	Schema
200	XML file downloaded successfully	application/json	Object
400	Bad request		
500	Internal server error		

10.16 **GET**/document-version/{documentType}/{documentRef}/{version}

Overview: Get document version

Description: Retrieves a specific version of the document with its content and metadata

Controller: [Document](#)

Method: [getDocumentVersion](#)

Parameters

Name	In	Required	Type	Description
documentType	path	Yes	string	Document type

documentRef	path	Yes	string	Document reference
version	path	Yes	string	Version

Responses

Status Code	Description	Content-Type	Schema
200	Document version retrieved successfully	application/json	Object
400	Bad request		
500	Internal server error		

11. Home Page

11.1 GET/my-recent-packages

Overview: Find my recent packages

Description: Retrieves the list of recently accessed packages for the current user

Controller: [Home Page](#)

Method: `findMyRecentPackages`

Responses

Status Code	Description	Content-Type	Schema
200	Recent packages retrieved successfully	application/json	Object
500	Internal server error		

11.2 POST/uploadNotifications

Overview: Upload notifications configuration

Description: Uploads and saves the notifications configuration settings

Controller: [Home Page](#)

Method: `configNotificationsUpload`

Request Body

Required	Content-Type	Schema
Yes	application/json	String

Responses

Status Code	Description	Content-Type	Schema
200	Notifications uploaded successfully	application/json	Object
500	Internal server error		

11.3 GET /fetchNotifications

Overview: Fetch notifications configuration

Description: Retrieves the current notifications configuration settings

Controller: [Home Page](#)

Method: `configNotificationsFetch`

Responses

Status Code	Description	Content-Type	Schema
200	Notifications fetched successfully	application/json	Object
500	Internal server error		

11.4 GET /my-favourite-packages

Overview: Find my favourite packages

Description: Retrieves the list of packages marked as favourites by the current user

Controller: [Home Page](#)

Method: `findMyFavouritePackages`

Responses

Status Code	Description	Content-Type	Schema
200	Favourite packages retrieved successfully	application/json	Object
500	Internal server error		

11.5 PUT /{documentRef}/toggle-favourite-package

Overview: Toggle favourite package

Description: Adds or removes a package from the current user's favourites list

Controller: [Home Page](#)

Method: `toggleFavouritePackage`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Favourite package toggled successfully	application/json	Object
500	Internal server error		

12. LEOS API

12.1 **GET**/secured/proposals/{proposalRef}/download

Overview: Download proposal

Description: Downloads the complete proposal package

Controller: [LEOS API](#)

Method: `downloadProposal`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
200	Proposal downloaded successfully	application/json	Object
500	Internal server error		

12.2 **GET**/secured/search/{userId}/{documentRef}

Overview: Get document for user

Description: Retrieves a specific document for the specified user

Controller: [LEOS API](#)

Method: `getDocumentForUser`

Parameters

Name	In	Required	Type	Description
------	----	----------	------	-------------

userId	path	Yes	string	User ID
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Document retrieved successfully	application/json	Object
500	Internal server error		

12.3 **PUT** /secured/proposals/{proposalRef}/update-annex-title/{annexId}

Overview: Update annex title

Description: Updates the title of a specific annex document

Controller: [LEOS API](#)

Method: `updateAnnexTitle`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
annexId	path	Yes	string	Annex ID
title	query	Yes	string	Title

Responses

Status Code	Description	Content-Type	Schema
204	Title updated successfully		
500	Internal server error		

12.4 **POST** /secured/compare

Overview: Compare contents

Description: Compares two document contents and returns the differences

Controller: [LEOS API](#)

Method: `compareContents`

Parameters

Name	In	Required	Type	Description
mode	query	Yes	integer	Mode

firstContent	query	Yes	MultipartFile	First content
secondContent	query	Yes	MultipartFile	Second content

Responses

Status Code	Description	Content-Type	Schema
200	Contents compared successfully	application/json	Object
500	Internal server error		

12.5 **POST**/secured/renditionfromleg

Overview: Get PDF from LEG file

Description: Generates and retrieves a PDF rendition from an uploaded LEG file

Controller: [LEOS API](#)

Method: [getPdfFromLegFile](#)

Parameters

Name	In	Required	Type	Description
legFile	query	Yes	MultipartFile	LEG file
type	query	Yes	string	Type

Responses

Status Code	Description	Content-Type	Schema
200	PDF retrieved successfully	application/json	Object
500	Internal server error		

12.6 **GET**/secured/export/{proposalRef}/{exportPackageId}

Overview: Get export package

Description: Downloads an export package for the specified proposal

Controller: [LEOS API](#)

Method: [getExportPackage](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
exportPackageId	path	Yes	string	Export package ID

Responses

Status Code	Description	Content-Type	Schema
200	Export package retrieved successfully	application/json	Object
500	Internal server error		

12.7 **GET**/secured/proposals/{proposalRef}

Overview: Get proposal details

Description: Retrieves detailed information about a specific proposal

Controller: [LEOS API](#)

Method: [getProposalDetails](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
200	Proposal details retrieved successfully	application/json	Object
500	Internal server error		

12.8 **POST**/secured/proposals/{proposalRef}/updateForeignAnnex/{annexId}

Overview: Update foreign annex

Description: Update foreign annex for hybrid documents

Controller: [LEOS API](#)

Method: [updateForeignAnnex](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	
annexId	path	Yes	string	
foreignAnnexFile	query	Yes	MultipartFile	

Responses

Status Code	Description	Content-Type	Schema
-------------	-------------	--------------	--------

204	Title updated successfully
500	Internal server error

12.9 **GET**/secured/users/current

Overview: Get current user

Description: Retrieves information about the currently authenticated user

Controller: [LEOS API](#)

Method: `getCurrentUser`

Responses

Status Code	Description	Content-Type	Schema
200	User retrieved successfully	application/json	Object
500	Internal server error		

12.10 **POST**/getHtmlRenditions

Overview: Get HTML renditions

Description: Generates HTML renditions from an uploaded document

Controller: [LEOS API](#)

Method: `getHtmlRenditions`

Parameters

Name	In	Required	Type	Description
document	query	Yes	MultipartFile	Document

Responses

Status Code	Description	Content-Type	Schema
200	Renditions retrieved successfully	application/json	Object
500	Internal server error		

12.11 **GET**/secured/organizations

Overview: Get organizations

Description: Retrieves the list of all organizations

Controller: [LEOS API](#)

Method: [getOrganizations](#)

Responses

Status Code	Description	Content-Type	Schema
200	Organizations retrieved successfully	application/json	Object
500	Internal server error		

12.12 **GET**/secured/proposals/{proposalRef}/milestones

Overview: Get proposal milestones

Description: Retrieves all milestones for a proposal with optional language filter

Controller: [LEOS API](#)

Method: [getProposalMilestones](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
language	query	No	string	Language

Responses

Status Code	Description	Content-Type	Schema
200	Milestones retrieved successfully	application/json	Object
500	Internal server error		

12.13 **POST**/secured/proposals/{proposalRef}/milestones

Overview: Create milestone

Description: Creates a new milestone for the proposal with a comment

Controller: [LEOS API](#)

Method: [createMilestone](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Request Body

Required	Content-Type	Schema
Yes	application/json	String

Responses

Status Code	Description	Content-Type	Schema
200	Milestone created successfully	application/json	Object
500	Internal server error		

12.14 **DELETE**/secured/proposals/{proposalRef}/deleteAnnex/{annexRef}

Overview: Delete annex

Description: Deletes a specific annex document from the proposal

Controller: [LEOS API](#)

Method: **deleteAnnex**

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
annexRef	path	Yes	string	Annex reference

Responses

Status Code	Description	Content-Type	Schema
204	Annex deleted successfully		
500	Internal server error		

12.15 **POST**/conValidation

Overview: CON validation

Description: Performs consilium validation on an uploaded ZIP file and sends results to email

Controller: [LEOS API](#)

Method: **conValidation**

Parameters

Name	In	Required	Type	Description
zipFile	query	Yes	MultipartFile	ZIP file
email	query	Yes	string	Email

Responses

Status Code	Description	Content-Type	Schema
200	Validation completed successfully	application/json	Object
500	Internal server error		

12.16 **GET**/secured/document/{documentRef}

Overview: Get document

Description: Retrieves the XML content of a specific document

Controller: [LEOS API](#)

Method: `getDocument`

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference

Responses

Status Code	Description	Content-Type	Schema
200	Document retrieved successfully	application/json	Object
500	Internal server error		

12.17 **POST**/secured/revisionDone

Overview: Update cloned proposal revision status

Description: Updates the revision status of a cloned proposal

Controller: [LEOS API](#)

Method: `updateClonedProposalRevisionStatus`

Parameters

Name	In	Required	Type	Description
cloneProposalId	query	Yes	string	Clone proposal ID
legFileId	query	Yes	string	LEG file ID

Responses

Status Code	Description	Content-Type	Schema
200	Status updated successfully	application/json	Object
500	Internal server error		

12.18 **GET** /secured/searchlegfile/{legFileId}

Overview: Get LEG file

Description: Retrieves a LEG file by ID with optional download flag

Controller: [LEOS API](#)

Method: `getLegFile`

Parameters

Name	In	Required	Type	Description
legFileId	path	Yes	string	LEG file ID
isDownload	query	No	boolean	Is download

Responses

Status Code	Description	Content-Type	Schema
200	LEG file retrieved successfully	application/json	Object
500	Internal server error		

12.19 **GET** /secured/document-ref/{packageId}

Overview: Find document reference by package ID and category

Description: Retrieves document reference using package ID and category

Controller: [LEOS API](#)

Method: `findDocumentRefByPackageIdAndCategory`

Parameters

Name	In	Required	Type	Description
packageId	path	Yes	string	Package ID

Responses

Status Code	Description	Content-Type	Schema
200	Document reference retrieved successfully	application/json	Object
500	Internal server error		

12.20 **GET**/secured/list-milestones-view-version/{documentRef}

Overview: Get list milestone document views from document

Description: Retrieves document views for all milestones using versioned reference

Controller: [LEOS API](#)

Method: [getListMilestoneDocumentViewsFromDoc](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
versionedReference	query	Yes	string	Versioned reference

Responses

Status Code	Description	Content-Type	Schema
200	Views retrieved successfully	application/json	Object
500	Internal server error		

12.21 **POST**/secured/proposals/{proposalRef}/createAnnex

Overview: Create proposal annex

Description: Creates a new annex document for the specified proposal

Controller: [LEOS API](#)

Method: [createProposalAnnex](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
204	Annex created successfully		
500	Internal server error		

12.22 **POST** /secured/proposals/{proposalRef}/createForeignAnnex

Overview: Create foreign annex

Description: Create foreign annex for hybrid documents

Controller: [LEOS API](#)

Method: [createProposalForeignAnnex](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	
foreignAnnexFile	query	Yes	MultipartFile	

Responses

Status Code	Description	Content-Type	Schema
204	Annex created successfully		
500	Internal server error		

12.23 **PUT** /secured/proposals/{proposalRef}/update-explanatory-title/{docId}

Overview: Update explanatory title

Description: Updates the title of a specific explanatory document

Controller: [LEOS API](#)

Method: [updateExplanatoryTitle](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
docId	path	Yes	string	Document ID
title	query	Yes	string	Title

Responses

Status Code	Description	Content-Type	Schema
204	Title updated successfully		
500	Internal server error		

12.24 **GET**/secured/search/{userId}

Overview: Get proposals for user

Description: Retrieves all proposals accessible by the specified user with optional filters

Controller: [LEOS API](#)

Method: [getProposalsForUser](#)

Parameters

Name	In	Required	Type	Description
userId	path	Yes	string	User ID
proposalId	query	Yes	string	Proposal ID
legFileStatus	query	Yes	string	LEG file status

Responses

Status Code	Description	Content-Type	Schema
200	Proposals retrieved successfully	application/json	Object
500	Internal server error		

12.25 **GET**/secured/milestones/{proposalRef}

Overview: Get LEG files for proposal

Description: Retrieves all milestone LEG files associated with a proposal

Controller: [LEOS API](#)

Method: [getLegFilesForProposal](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
200	LEG files retrieved successfully	application/json	Object
500	Internal server error		

12.26 [POST/secured/cloneProposal](#)

Overview: Clone proposal from LEG

Description: Creates a cloned proposal from a LEG file for a target user

Controller: [LEOS API](#)

Method: [cloneProposalFromLeg](#)

Parameters

Name	In	Required	Type	Description
file	query	Yes	MultipartFile	LEG file
targetUser	query	Yes	string	Target user
connectedEntity	query	Yes	string	Connected entity
iscRef	query	Yes	string	ISC reference

Responses

Status Code	Description	Content-Type	Schema
200	Proposal cloned successfully	application/json	Object
500	Internal server error		

12.27 [POST/secured/collectionfromleg](#)

Overview: Create collection from LEG

Description: Creates a new document collection from an uploaded LEG file

Controller: [LEOS API](#)

Method: [createCollectionFromLeg](#)

Parameters

Name	In	Required	Type	Description
file	query	Yes	MultipartFile	File

Responses

Status Code	Description	Content-Type	Schema
200	Collection created successfully	application/json	Object
500	Internal server error		

12.28 **GET** /secured/searchlegfile/anystatus/{legFileId}

Overview: Get LEG file any status

Description: Retrieves a LEG file by ID regardless of its status

Controller: [LEOS API](#)

Method: [getLegFileAnyStatus](#)

Parameters

Name	In	Required	Type	Description
legFileId	path	Yes	string	LEG file ID
isDownload	query	No	boolean	Is download

Responses

Status Code	Description	Content-Type	Schema
200	LEG file retrieved successfully	application/json	Object
500	Internal server error		

12.29 **GET** /secured/list-milestones-view/pdf-export/{documentRef}

Overview: Get milestone export PDF

Description: Exports milestone document views as a PDF using LEG file information

Controller: [LEOS API](#)

Method: [getMilestoneExportPDF](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
legFileName	query	Yes	string	LEG file name
legFileId	query	Yes	string	LEG file ID

Responses

Status Code	Description	Content-Type	Schema
200	PDF exported successfully	application/json	Object
500	Internal server error		

12.30 [POST](#)/secured/updateAnnexOrder/{proposalRef}/annex/{annexRef}

Overview: Update proposal annex order

Description: Changes the order of an annex within the proposal by moving it up or down

Controller: [LEOS API](#)

Method: [updateProposalAnnexOrder](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
annexRef	path	Yes	string	Annex reference
moveDirection	query	Yes	string	Move direction
timesToMove	query	Yes	integer	Times to move

Responses

Status Code	Description	Content-Type	Schema
204	Order updated successfully		
500	Internal server error		

12.31 [POST](#)/secured/updateAnnexPosition/{proposalRef}/annex

Overview: Update proposal annex position

Description: Updates the position of an annex by specifying previous and next indices

Controller: [LEOS API](#)

Method: [updateProposalAnnexPosition](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
previousIndex	query	Yes	integer	Previous index
nextIndex	query	Yes	integer	Next index

Responses

Status Code	Description	Content-Type	Schema
204	Position updated successfully		
500	Internal server error		

12.32 **GET** /secured/list-milestones-view/{documentRef}

Overview: Get list milestone document views

Description: Retrieves document views for all milestones using LEG file information

Controller: [LEOS API](#)

Method: [getListMilestoneDocumentViews](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
legFileName	query	Yes	string	LEG file name
legFileId	query	Yes	string	LEG file ID

Responses

Status Code	Description	Content-Type	Schema
200	Views retrieved successfully	application/json	Object
500	Internal server error		

12.33 **GET** /secured/list-milestones-view-version/pdf-export/{documentRef}

Overview: Get milestone export PDF from version

Description: Exports milestone document views as a PDF using versioned reference

Controller: [LEOS API](#)

Method: [getMilestoneExportPDFFromVersion](#)

Parameters

Name	In	Required	Type	Description
documentRef	path	Yes	string	Document reference
versionedReference	query	Yes	string	Versioned reference

Responses

Status Code	Description	Content-Type	Schema
200	PDF exported successfully	application/json	Object
500	Internal server error		

12.34 GET/secured/config

Overview: Get config

Description: Retrieves application configuration settings

Controller: [LEOS API](#)

Method: getConfig

Responses

Status Code	Description	Content-Type	Schema
200	Config retrieved successfully	application/json	Object
500	Internal server error		

12.35 GET/token

Overview: Get token

Description: Retrieves authentication token for the current session

Controller: [LEOS API](#)

Method: getToken

Responses

Status Code	Description	Content-Type	Schema
200	Token retrieved successfully	application/json	Object
500	Internal server error		

13. App Info

13.1 GET/

Overview: Get application information

Description: Retrieves application version and build information

Controller: [App Info](#)

Method: getAppInfo

Responses

Status Code	Description	Content-Type	Schema
200	Application information retrieved successfully	application/json	Map
500	Internal server error	application/json	object

14. LEOS Light API

14.1 **GET**/editlight/test

Overview: Test RESTful service

Description: Tests the availability and connectivity of the RESTful service

Controller: [LEOS Light API](#)

Method: **test**

Responses

Status Code	Description	Content-Type	Schema
200	Test successful	application/json	string
500	Internal server error		

14.2 **POST**/secured/leos-light/export-document

Overview: Export document from LEOS Light

Description: Exports a document from LEOS Light system in the requested format

Controller: [LEOS Light API](#)

Method: [exportDocument](#)

Request Body

Required	Content-Type	Schema
Yes	application/json	ExportDocumentRequest

Responses

Status Code	Description	Content-Type	Schema
200	Document exported successfully	application/json	Object
500	Internal server error		

14.3 **POST**/secured/leos-light/import-document

Overview: Import document to LEOS Light

Description: Imports a document into LEOS Light system with specified language and optiona...

Controller: [LEOS Light API](#)

Method: `importDocument`

Parameters

Name	In	Required	Type	Description
inputFile	query	Yes	MultipartFile	Input file to import
language	query	Yes	string	Language code
callbackAddress	query	No	string	Callback address

Responses

Status Code	Description	Content-Type	Schema
200	Document imported successfully	application/json	Object
500	Internal server error		

14.4 **GET**/leos-light/context-token

Overview: Get context token for LEOS Light

Description: Generates a context token for LEOS Light authentication with client and user ...

Controller: [LEOS Light API](#)

Method: `getContextToken`

Parameters

Name	In	Required	Type	Description
clientId	query	Yes	string	Client ID
user	query	Yes	string	User name
role	query	Yes	string	User role
systemName	query	Yes	string	System name

Responses

Status Code	Description	Content-Type	Schema
200	Context token retrieved successfully	application/json	string
500	Internal server error		

14.5 [POST/secured/editlight/importProposal](#)

Overview: Import proposal from LEG file

Description: Imports a proposal into LEOS Light from an uploaded LEG file

Controller: [LEOS Light API](#)

Method: [importProposal](#)

Parameters

Name	In	Required	Type	Description
legFile	query	Yes	MultipartFile	LEG file to import

Responses

Status Code	Description	Content-Type	Schema
200	Proposal imported successfully	application/json	Object
500	Internal server error		

14.6 [POST/leos-light/test-callback](#)

Overview: Test callback address

Description: Tests the callback address functionality by uploading a test file

Controller: [LEOS Light API](#)

Method: [testCallbackAddress](#)

Parameters

Name	In	Required	Type	Description
file	query	Yes	MultipartFile	Test file

Responses

Status Code	Description	Content-Type	Schema
200	Callback address tested successfully	application/json	Object
500	Internal server error		

15. Proposal Management

15.1 GET /{proposalRef}/getExports

Overview: Get exports

Description: Retrieves all export packages for the specified proposal

Controller: [Proposal Management](#)

Method: `getExports`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
200	Exports retrieved successfully	application/json	Object
500	Internal server error		

15.2 PUT /{proposalRef}

Overview: Update proposal metadata

Description: Updates metadata information for the specified proposal

Controller: [Proposal Management](#)

Method: `updateProposalMetadata`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Request Body

Required	Content-Type	Schema
Yes	application/json	UpdateProposalRequest

Responses

Status Code	Description	Content-Type	Schema
200	Metadata updated successfully	application/json	Object
500	Internal server error		

15.3 DELETE/{proposalRef}

Overview: Delete proposal

Description: Permanently deletes the specified proposal and all its associated documents

Controller: [Proposal Management](#)

Method: `deleteProposal`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
204	Proposal deleted successfully		
500	Internal server error		

15.4 POST/conValidateLegFile

Overview: ConValidate leg file

Description: Performs consilium validation on the uploaded leg file

Controller: [Proposal Management](#)

Method: `conValidateLegFile`

Parameters

Name	In	Required	Type	Description
legFile	query	Yes	MultipartFile	Leg file

Responses

Status Code	Description	Content-Type	Schema
200	Leg file validated successfully	application/json	string
400	Invalid file name		
500	Internal server error		

15.5 **POST**/createExplanatory

Overview: Create explanatory

Description: Creates an explanatory document for the specified proposal using a template

Controller: [Proposal Management](#)

Method: [createExplanatory](#)

Request Body

Required	Content-Type	Schema
Yes	application/json	ExplanatoryRequest

Responses

Status Code	Description	Content-Type	Schema
200	Explanatory created successfully	application/json	Object
500	Internal server error		

15.6 **GET**/{{proposalRef}}/notifyExport/{{exportId}}

Overview: Notify export

Description: Sends notification for the specified export package

Controller: [Proposal Management](#)

Method: [notifyExport](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
exportId	path	Yes	string	Export ID

Responses

Status Code	Description	Content-Type	Schema
200	Export notified successfully	application/json	Object
500	Internal server error		

15.7 **DELETE** /{proposalRef}/deleteExplanatory/{explanatoryRef}

Overview: Delete explanatory

Description: Deletes the specified explanatory document from the proposal

Controller: [Proposal Management](#)

Method: **deleteExplanatory**

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
explanatoryRef	path	Yes	string	Explanatory reference

Responses

Status Code	Description	Content-Type	Schema
200	Explanatory deleted successfully	application/json	Object
500	Internal server error		

15.8 **PUT** /{proposalRef}/updateExport/{exportId}

Overview: Update export

Description: Updates an export package with new comments

Controller: [Proposal Management](#)

Method: **updateExport**

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
exportId	path	Yes	string	Export ID

Request Body

Required	Content-Type	Schema
Yes	application/json	List

Responses

Status Code	Description	Content-Type	Schema
200	Export updated successfully	application/json	Object
500	Internal server error		

15.9 **POST**/validateLegFile

Overview: Validate leg file

Description: Validates the structure and content of an uploaded leg file

Controller: [Proposal Management](#)

Method: `validateLegFile`

Parameters

Name	In	Required	Type	Description
legFile	query	Yes	MultipartFile	Leg file

Responses

Status Code	Description	Content-Type	Schema
200	Leg file validated successfully	application/json	LegFileValidation
500	Internal server error		

15.10 **GET**/proposalRef/export

Overview: Export proposal

Description: Initiates export process for the proposal with specified output format

Controller: [Proposal Management](#)

Method: `exportProposal`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
exportOutput	query	Yes	string	Export output

Responses

Status Code	Description	Content-Type	Schema
200	Proposal exported successfully	application/json	Object
500	Internal server error		

15.11 **GET** /{proposalRef}/validate

Overview: Validate proposal

Description: Validates the proposal structure and content

Controller: [Proposal Management](#)

Method: `validateProposal`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
200	Proposal validated successfully	application/json	string
500	Internal server error		

15.12 **GET** /{proposalRef}/previewExport/{exportId}

Overview: Preview export

Description: Downloads the specified export package for preview

Controller: [Proposal Management](#)

Method: `previewExport`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
exportId	path	Yes	string	Export ID

Responses

Status Code	Description	Content-Type	Schema
200	Export previewed successfully	application/json	Object
500	Internal server error		

15.13 **POST**/upload

Overview: Upload proposal

Description: Uploads a leg file to create a new proposal

Controller: [Proposal Management](#)

Method: [uploadProposal](#)

Parameters

Name	In	Required	Type	Description
legFile	query	Yes	MultipartFile	Leg file

Responses

Status Code	Description	Content-Type	Schema
200	Proposal uploaded successfully	application/json	Object
500	Internal server error		

15.14 **DELETE**/proposalRef/deleteExport/{exportId}

Overview: Delete export

Description: Deletes the specified export package from the proposal

Controller: [Proposal Management](#)

Method: [deleteExport](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
exportId	path	Yes	string	Export ID

Responses

Status Code	Description	Content-Type	Schema
200	Export deleted successfully	application/json	Object
500	Internal server error		

15.15 GET/searchUser

Overview: Search user

Description: Searches for users in the repository by search key

Controller: [Proposal Management](#)

Method: `searchUser`

Parameters

Name	In	Required	Type	Description
searchKey	query	Yes	string	Search key

Responses

Status Code	Description	Content-Type	Schema
200	Users retrieved successfully	application/json	Object
500	Internal server error		

15.16 POST/copyAct

Overview: Copy act

Description: Creates a copy of an existing act with all its associated documents

Controller: [Proposal Management](#)

Method: `copyAct`

Request Body

Required	Content-Type	Schema
Yes	application/json	CreateProposalCopyRequest

Responses

Status Code	Description	Content-Type	Schema
200	Act copied successfully	application/json	Object
500	Internal server error		

15.17 **PUT** /updateDocPurpose/{proposalRef}

Overview: Update proposal document purpose

Description: Updates the document purpose and EEA relevance for the specified proposal

Controller: [Proposal Management](#)

Method: [updateProposalDocPurpose](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Request Body

Required	Content-Type	Schema
Yes	application/json	UpdateProposalRequest

Responses

Status Code	Description	Content-Type	Schema
200	Document purpose updated successfully	application/json	Object
500	Internal server error		

15.18 **POST** /{legFileId}/linguistic-versions

Overview: Create linguistic versions

Description: Creates linguistic versions from a milestone for the specified leg file

Controller: [Proposal Management](#)

Method: [createLinguisticVersions](#)

Parameters

Name	In	Required	Type	Description
legFileId	path	Yes	string	Leg file ID

Request Body

Required	Content-Type	Schema
Yes	application/json	List

Responses

Status Code	Description	Content-Type	Schema
200	Linguistic versions created successfully	application/json	Object

500	Internal server error
-----	-----------------------

15.19 **GET** /searchUsersByJobTitle

Overview: Search users by job title

Description: Retrieves users from the repository filtered by job title

Controller: [Proposal Management](#)

Method: `searchUsersByJobTitle`

Parameters

Name	In	Required	Type	Description
jobTitle	query	Yes	string	Job title

Responses

Status Code	Description	Content-Type	Schema
200	Users retrieved successfully	application/json	Object
500	Internal server error		

15.20 **GET** /{proposalRef}/export/download

Overview: Download export proposal

Description: Downloads the exported proposal in the specified output format

Controller: [Proposal Management](#)

Method: `exportProposalDownload`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
exportOutput	query	Yes	string	Export output

Responses

Status Code	Description	Content-Type	Schema
200	Export downloaded successfully	application/json	Object
500	Internal server error		

15.21 **POST**{proposalRef}/create-financial-statement

Overview: Create financial statement

Description: Creates a financial statement document for the specified proposal

Controller: [Proposal Management](#)

Method: [createFinancialStatement](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
204	Financial statement created successfully		

15.22 **POST**/createExplanatoryDocument

Overview: Create explanatory document

Description: Creates a new explanatory document with specified template, purpose and EEA r...

Controller: [Proposal Management](#)

Method: [createExplanatoryDocument](#)

Request Body

Required	Content-Type	Schema
Yes	application/json	CreateExplanatoryDocumentRequest

Responses

Status Code	Description	Content-Type	Schema
200	Explanatory document created successfully	application/json	Object
400	Method not supported		
500	Internal server error		

15.23 **DELETE**{proposalRef}/delete-financial-statement/{financialStatementRef}

Overview: Delete financial statement

Description: Deletes the specified financial statement from the proposal

Controller: [Proposal Management](#)

Method: `deleteFinancialStatement`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
financialStatementRef	path	Yes	string	Financial statement reference

Responses

Status Code	Description	Content-Type	Schema
204	Financial statement deleted successfully		

16. Table of Content Management

16.1 **POST**/validate-node-drop

Overview: Validate node drop

Description: Validates whether a node can be dropped at a specific position in the table o...

Controller: [Table of Content Management](#)

Method: `validateNodeDrop`

Request Body

Required	Content-Type	Schema
Yes	application/json	NodeDropValidationRequest

Responses

Status Code	Description	Content-Type	Schema
200	Node drop validated successfully	application/json	Object
500	Internal server error		

16.2 **POST**/validate-toc

Overview: Validate table of contents

Description: Validates the structure and integrity of the table of contents

Controller: [Table of Content Management](#)

Method: `validateToc`

Request Body

Required	Content-Type	Schema
Yes	application/json	TocValidationRequest

Responses

Status Code	Description	Content-Type	Schema
200	TOC validated successfully	application/json	Object
500	Internal server error		

17. Workflow Collaborator Management

17.1 **GET**/{"proposalRef"}/workflow-collaborators

Overview: Get workflow collaborator ACL

Description: Retrieves access control list permissions for the current workflow collaborator

Controller: [Workflow Collaborator Management](#)

Method: `getWorkflowCollaboratorAcl`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
Authorization	header	Yes	string	Authorization header

Responses

Status Code	Description	Content-Type	Schema
200	Workflow collaborator ACL retrieved successfully	application/json	WorkflowCollaboratorDTO
500	Internal server error		

17.2 **POST**/{proposalRef}/workflow-collaborators

Overview: Add workflow collaborator ACL

Description: Adds access control list permissions for a workflow collaborator to the proposal

Controller: [Workflow Collaborator Management](#)

Method: [addWorkflowCollaboratorAcl](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
Authorization	header	Yes	string	Authorization header

Request Body

Required	Content-Type	Schema
Yes	application/json	WorkflowCollaboratorAclRequest

Responses

Status Code	Description	Content-Type	Schema
200	Workflow collaborator ACL added successfully	application/json	Object
500	Internal server error		

17.3 **DELETE**/{proposalRef}/workflow-collaborators

Overview: Delete workflow collaborator ACL

Description: Removes access control list permissions for a workflow collaborator from the ...

Controller: [Workflow Collaborator Management](#)

Method: [deleteWorkflowCollaboratorAcl](#)

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference
Authorization	header	Yes	string	Authorization header

Responses

Status Code	Description	Content-Type	Schema
200	Workflow collaborator ACL deleted successfully	application/json	Object

500	Internal server error
-----	-----------------------

17.4 **GET**/{proposalRef}/workflow-collaborators/all

Overview: Get all workflow collaborator ACLs

Description: Retrieves all workflow collaborator access control lists for the proposal

Controller: [Workflow Collaborator Management](#)

Method: `getWorkflowCollaboratorAcls`

Parameters

Name	In	Required	Type	Description
proposalRef	path	Yes	string	Proposal reference

Responses

Status Code	Description	Content-Type	Schema
200	All workflow collaborator ACLs retrieved successfully	application/json	List
500	Internal server error		

18. Workspace Management

18.1 **POST**/filterProposals

Overview: Filter proposals

Description: Filters and retrieves proposals based on specified criteria

Controller: [Workspace Management](#)

Method: `filterProposals`

Request Body

Required	Content-Type	Schema
Yes	application/json	FilterProposalsRequest

Responses

Status Code	Description	Content-Type	Schema
200	Proposals filtered successfully	application/json	Object
500	Internal server error		

18.2 **POST**/createPackage

Overview: Create package

Description: Creates a new proposal package with specified configuration

Controller: [Workspace Management](#)

Method: [createPackage](#)

Request Body

Required	Content-Type	Schema
Yes	application/json	CreateProposalRequest

Responses

Status Code	Description	Content-Type	Schema
200	Package created successfully	application/json	Object
500	Internal server error		

18.3 **GET**/getCustomTemplates/{entityName}

Overview: Get custom templates

Description: Retrieves custom templates for a specific entity

Controller: [Workspace Management](#)

Method: [getCustomTemplates](#)

Parameters

Name	In	Required	Type	Description
entityName	path	Yes	string	Entity name

Responses

Status Code	Description	Content-Type	Schema
200	Custom templates retrieved successfully	application/json	Object
500	Internal server error		

18.4 GET/getTemplates

Overview: Get templates

Description: Retrieves all available document templates

Controller: [Workspace Management](#)

Method: `getTemplates`

Responses

Status Code	Description	Content-Type	Schema
200	Templates retrieved successfully	application/json	Object
500	Internal server error
